===============================================================================
Project Code: FLSU0010
Project Name: National study with low SES oversample
Prepared for: Sarah R. Warren, Florida State University
Interviews: 2150
Field Period:  April 07, 2022 - April 15, 2022
Project Manager: Alexis Essa, alexis.essa@yougov.colm
===============================================================================
```

YouGov interviewed 2285 respondents who were then matched down to a sample of 2150 to produce the final dataset. These were broken down into the following samples:

1445 nationally representative sample(matched to 1400)
840 low SES oversample(matched to 750)

The respondents from each sample were matched to sampling frames on gender, age, race, and education. The frames were constructed by stratified sampling from the full 2019 American Community Survey (ACS) 1-year sample with selection within strata by weighted sampling with replacements (using the person weights on the public use files).

The matched cases of each sample were weighted to their respective sampling frames using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race, years of education and region. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2016 and 2020 Presidential vote choice(nationally representative sample), gender, age, race and education to produce the final weight for each sample.
